# Liquid Democracy Origins

## Delegative Democracy

Bryan Ford

May 15, 2002

### **Abstract**

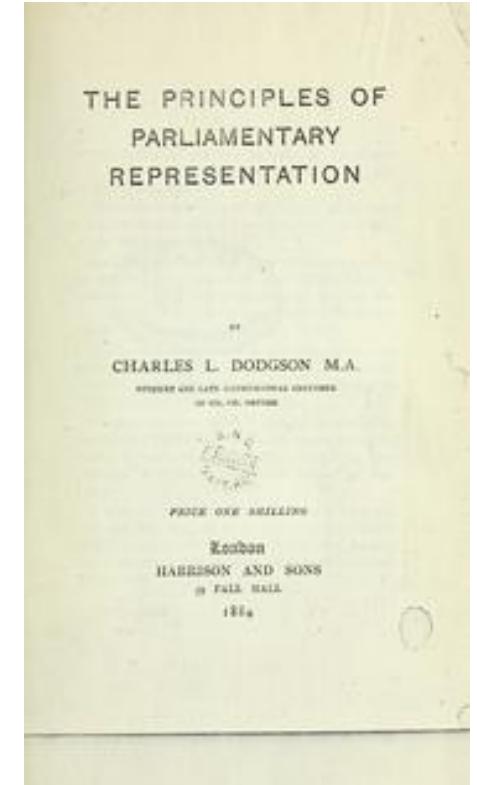

Delegative democracy is a new paradigm for democratic organization which emphasizes individually chosen vote transfers (“delegation”) over mass election. Delegative democracy combines the best elements of direct and representative democracy by replacing artificially imposed representation structures with an adaptive structure founded on real personal and group trust relationships. Delegative democracy empowers individuals and encourages widespread direct participation in a democratic organization, without unduly burdening or disenfranchising those members who, for lack of time, interest, or knowledge, would prefer to take a more passive role.

# Liquid Democracy Origins

- Dennis Lomax, “[Beyond Politics](#)” (2003)
- Joi Ito, “[Emergent Democracy](#)” (2003)
- Sayke, “[Liquid Democracy](#)” (2003)
- James Green-Armytage,  
“[Direct Democracy by Delegable Proxy](#)” (2005)
- Mark Rosst, “[Structural Deep Democracy](#)” (2005)
- Mikael Nordfors, “[Democracy 2.1](#)” (2006)
- ...

# Pre-Internet precedents

Lewis Carroll, “Principles of  
Parliamentary Representation”  
(1884)

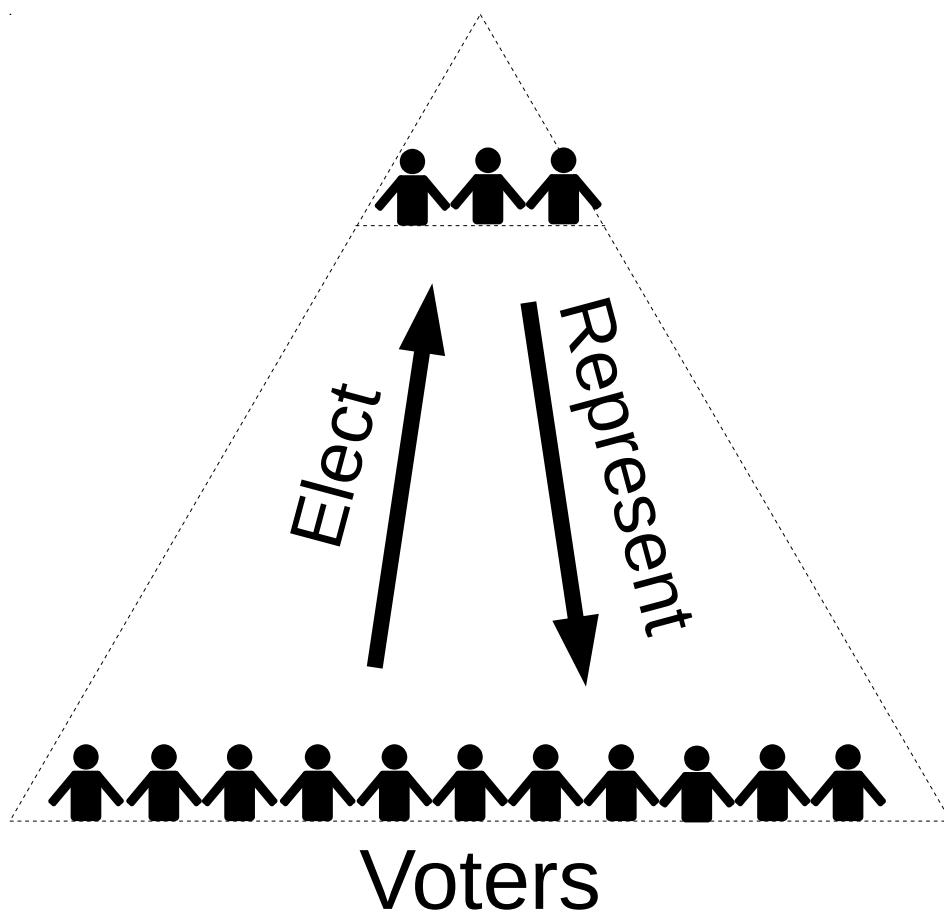

James C. Miller,  
“Direct and proxy voting  
in the legislative process”  
(1969)

# What is Liquid Democracy?

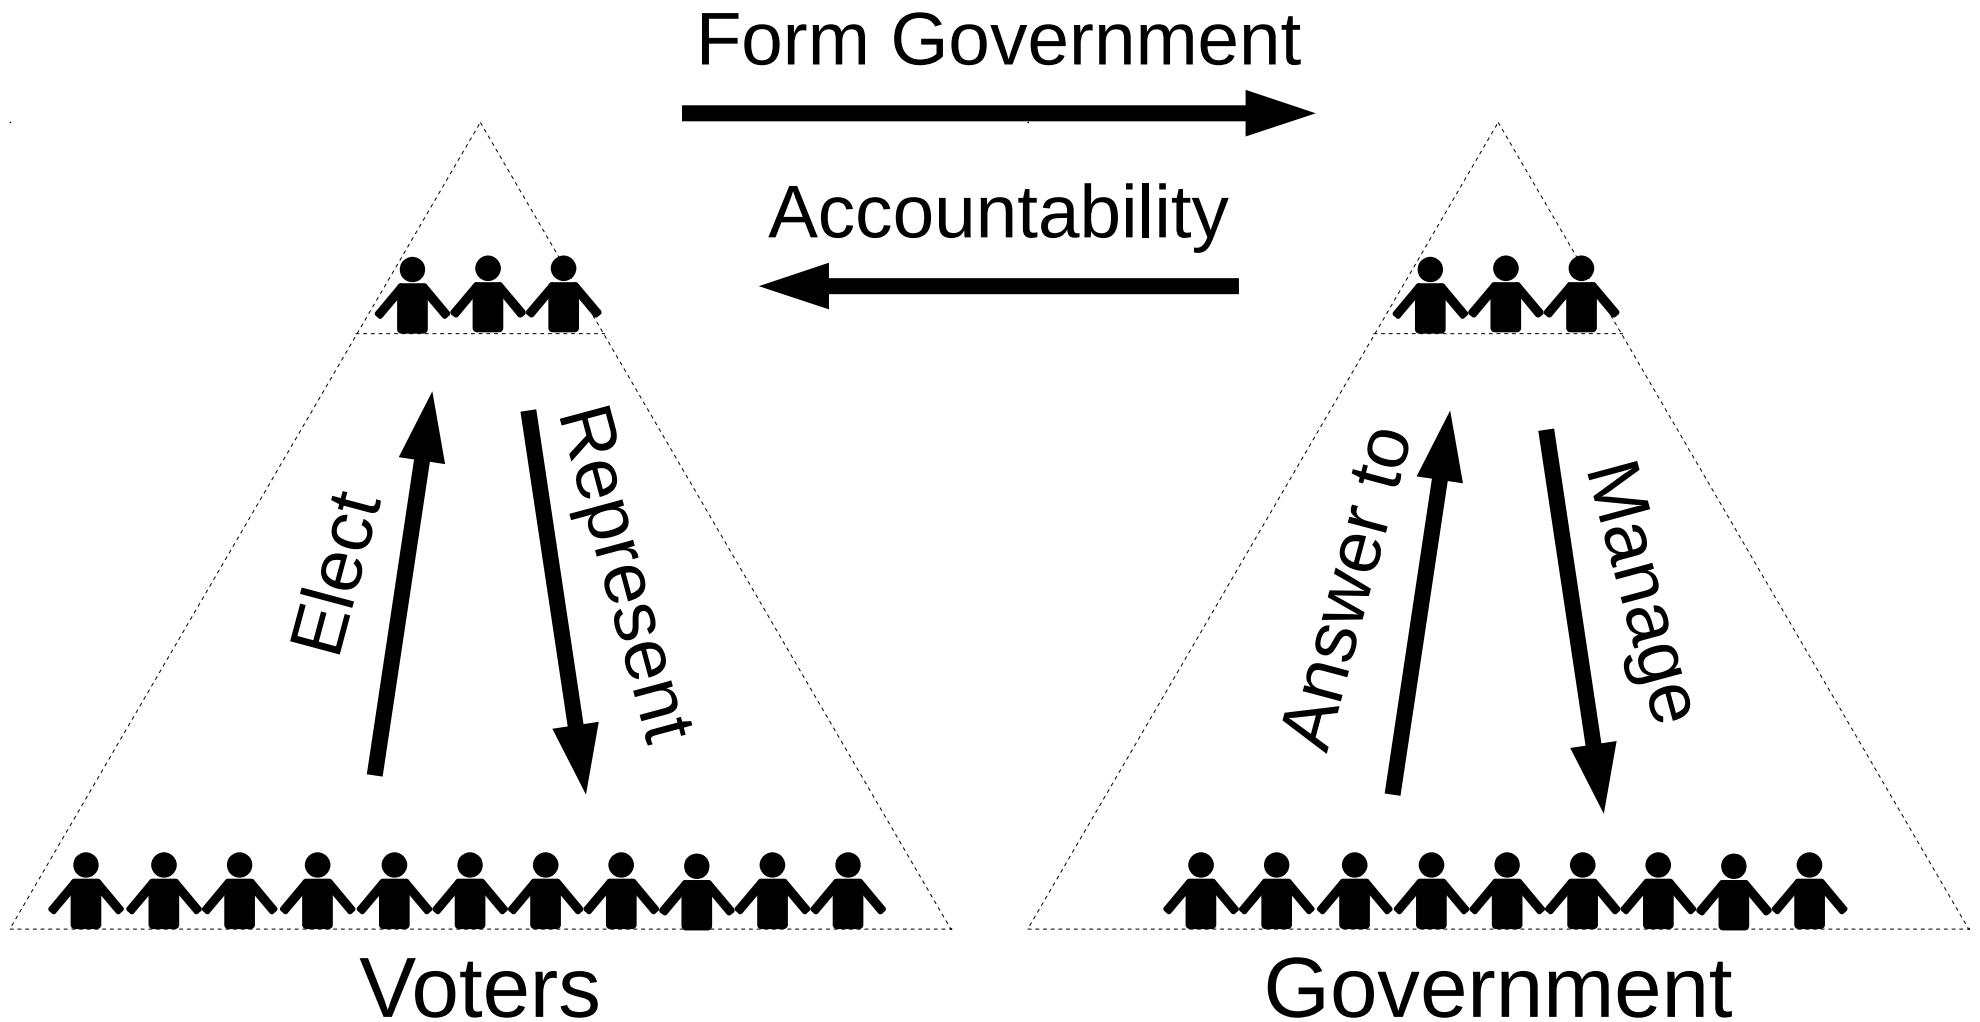

In principle, a combination of the “best parts” of representative democracy and direct democracy

# Representative Democracy

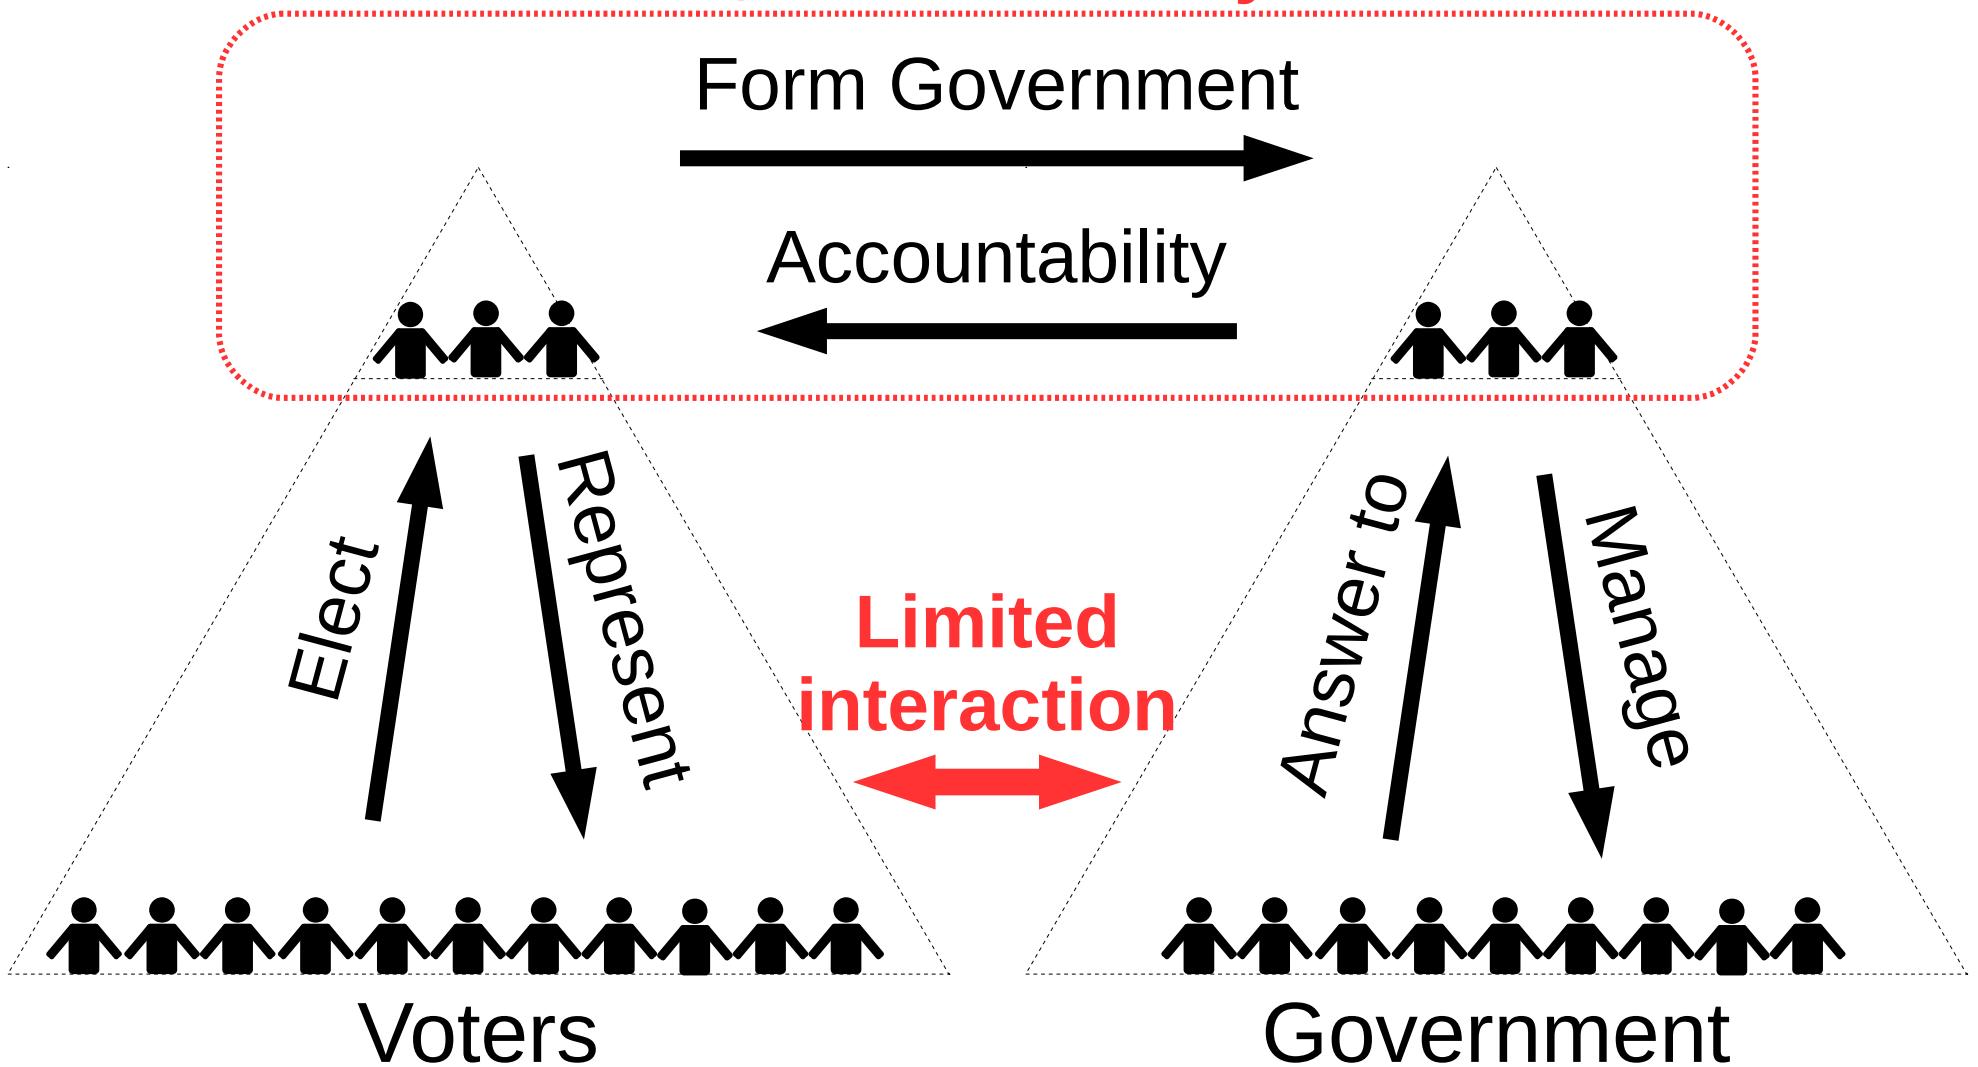

# Representative Democracy

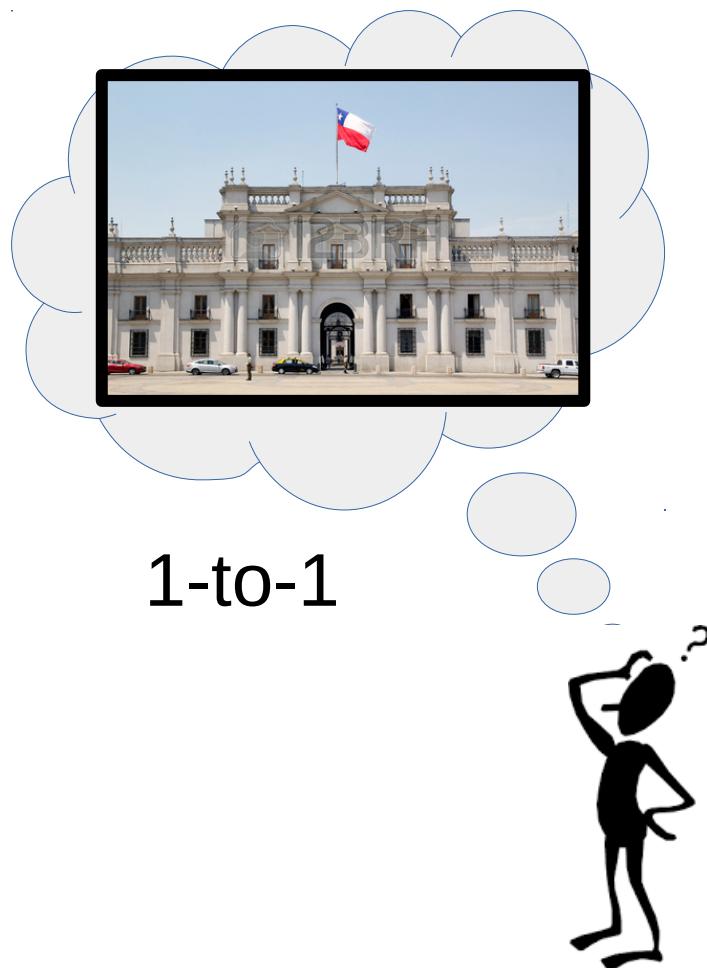

# Representative Democracy

**Information, accountability bottleneck**

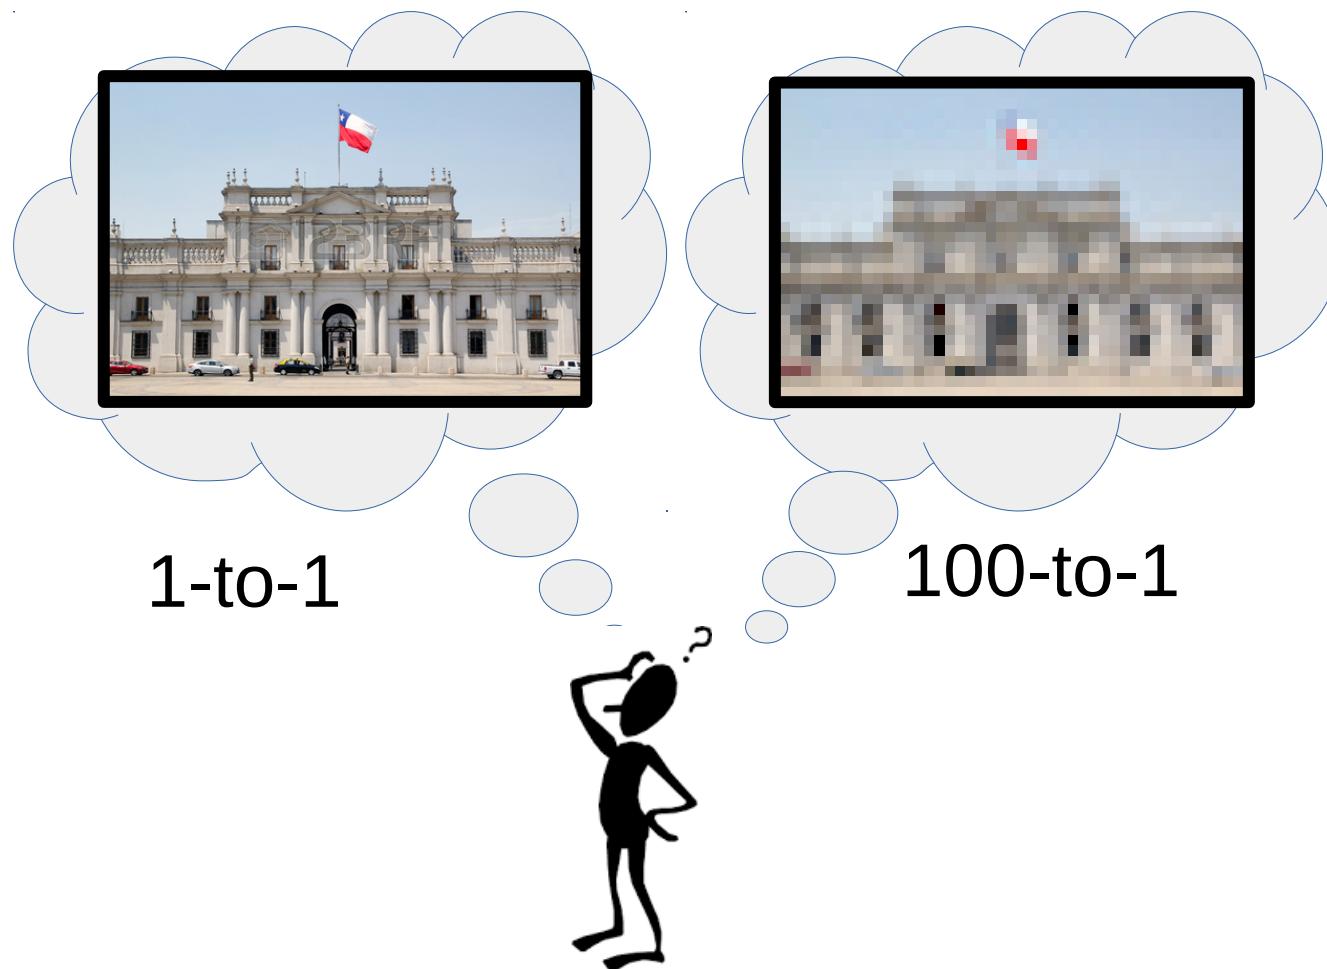

# Representation = Compression of Voter Preference Information

Suppose a well-informed voter has a clear picture  
of what they want from government...

# Representation = Compression of Voter Preference Information

Suppose a well-informed voter has a clear picture of what they want from government...

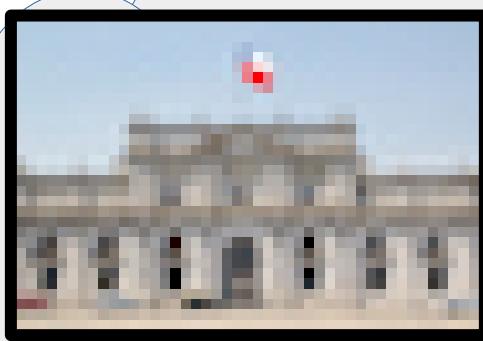

# Representation = Compression of Voter Preference Information

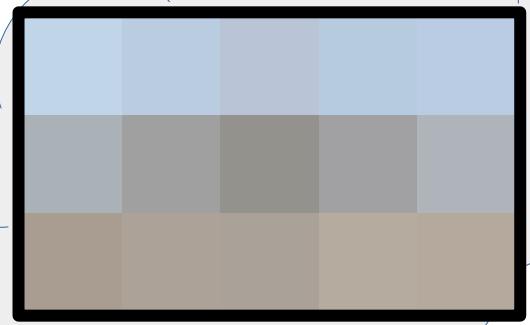

Suppose a well-informed voter has a clear picture of what they want from government...

1-to-1

100-to-1

10,000-to-1

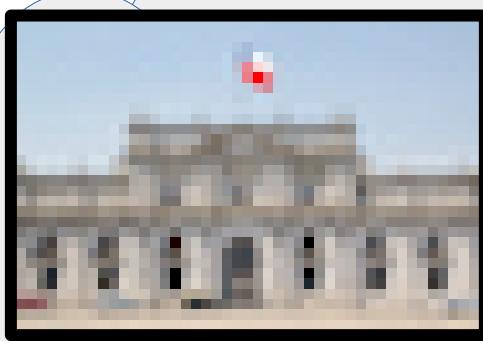

# Representation = Compression of Voter Preference Information

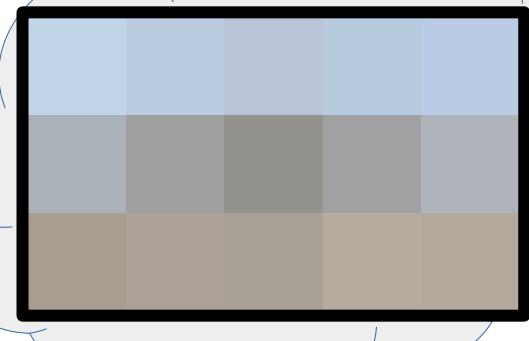

Suppose a well-informed voter has a clear picture of what they want from government...

1-to-1

100-to-1

10,000-to-1

US Congress:  
700,000 voters to  
1 representative

# The Ideal of Direct Democracy

Get the people involved in the regular, everyday process of governmental decision-making.

Every voter

- learns about,
- decides, and
- votes on

every important community issue

# High-Tech Direct Democracy?

What if democracy could fully leverage today's (and tomorrow's) best available technologies?

- Involve voters *continuously* in governance
- Allow voters to discuss issues
- Express support for positions
- Initiate new proposals
- ...

# Beautiful dream

Even if we could make the technology work,  
and secure enough...

# Problems with Direct Democracy

They're made of **people**. People with...

# Problems with Direct Democracy

They're made of **people**. People with...

- Varying time, attention, and commitment
  - A few get deep into an issue, others less so

# Problems with Direct Democracy

They're made of **people**. People with...

- Varying time, attention, and commitment
  - A few get deep into an issue, others less so
- Varying knowledge, expertise on any issue
  - Ignorant loudmouth gets as much time and voting power as respected expert

# Problems with Direct Democracy

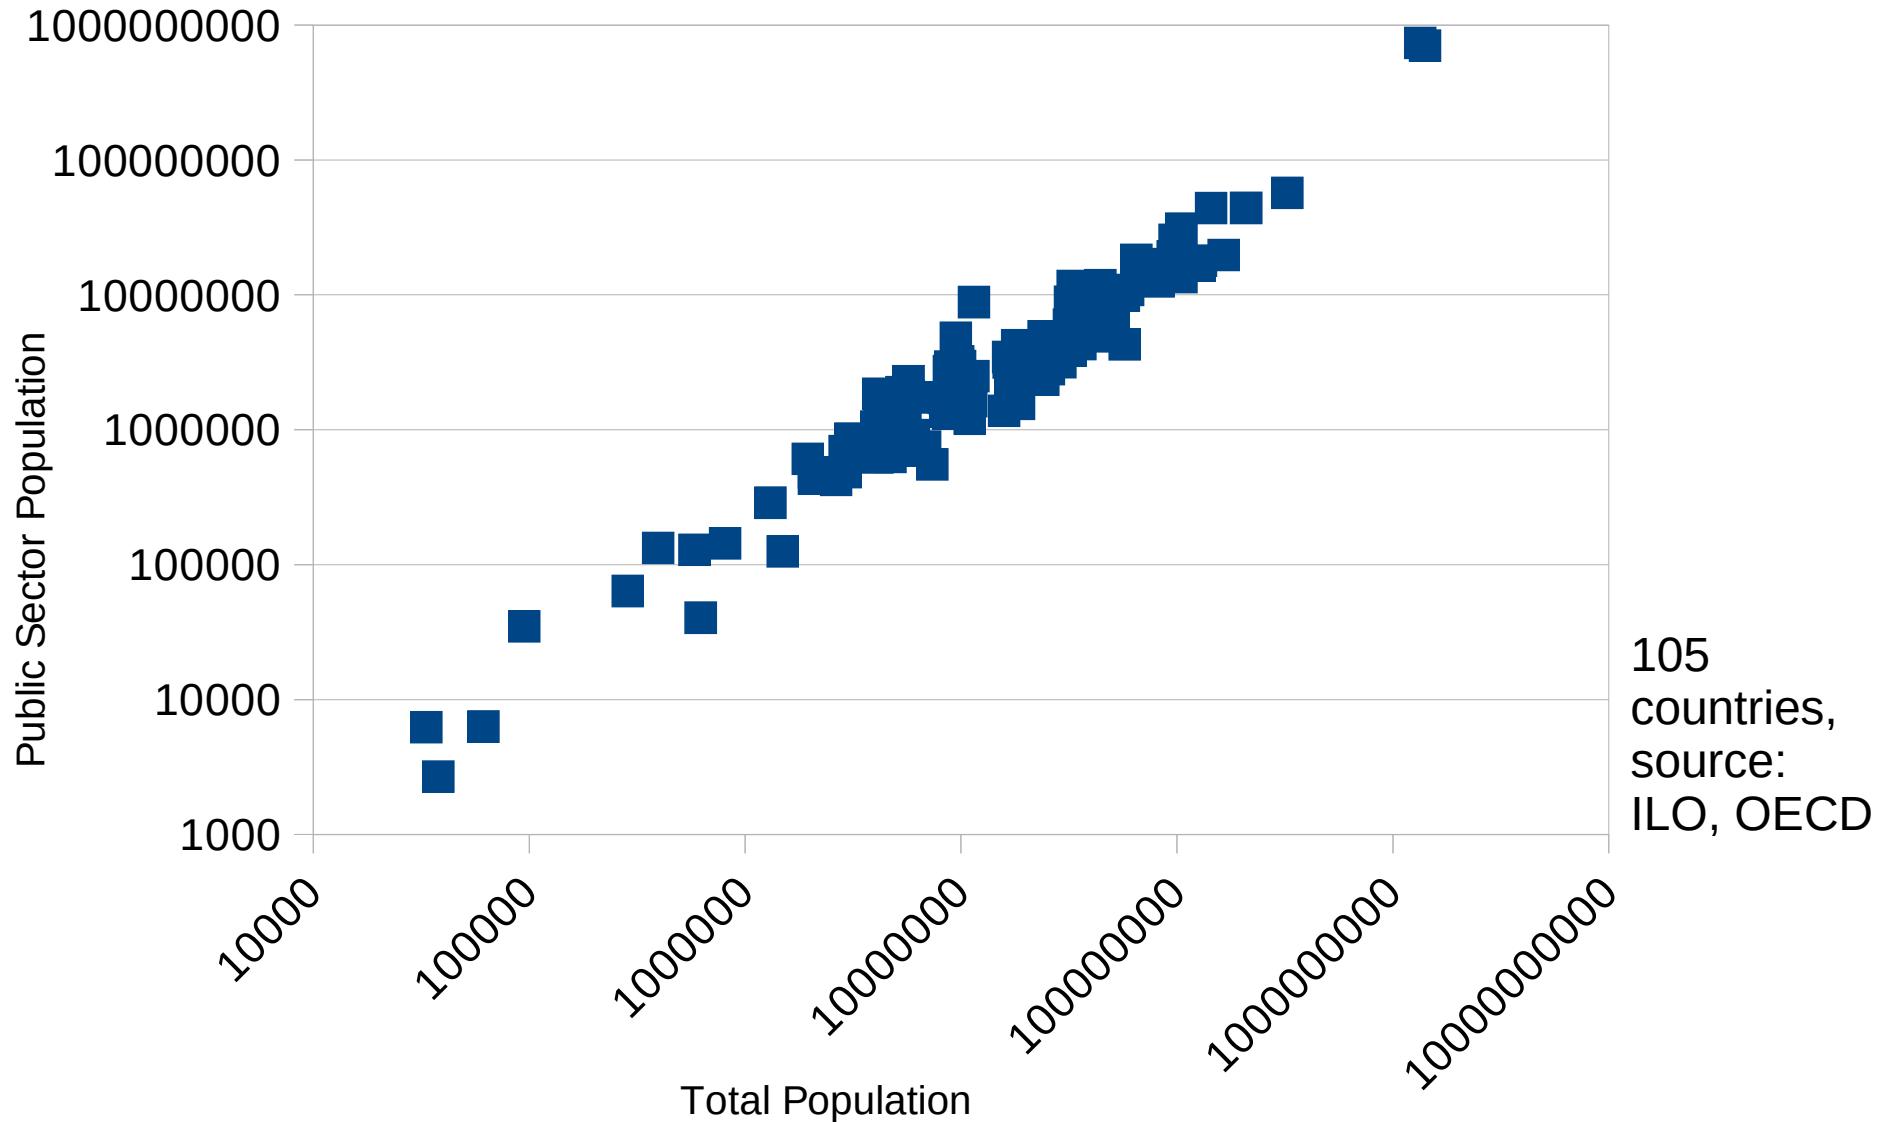

They're made of **people**. People with...

- Varying time, attention, and commitment
  - A few get deep into an issue, others less so
- Varying knowledge, expertise on any issue
  - Ignorant loudmouth gets as much time and voting power as respected expert
- Only 24 hours in each day
  - Even in small groups, direct democracy can exclude anyone with something better to do

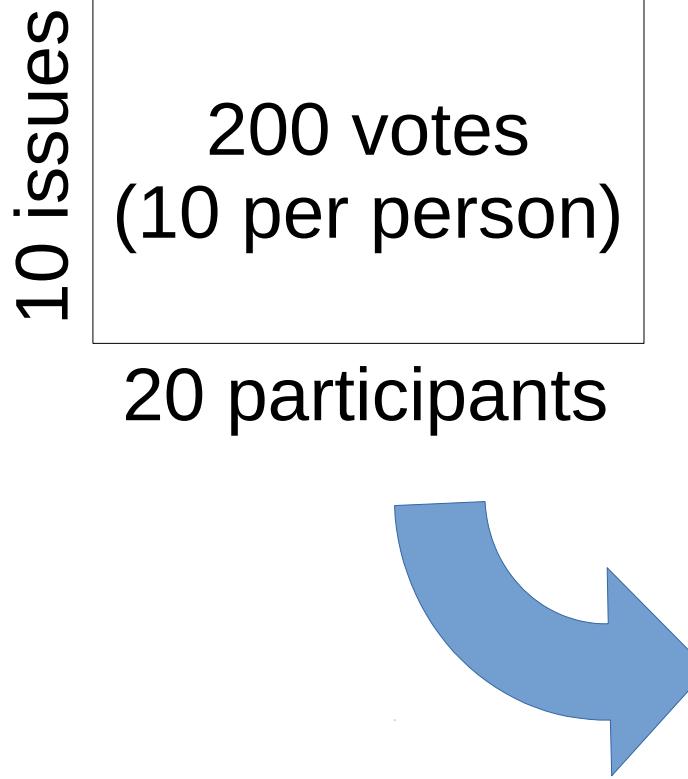

Pure direct democracy just **doesn't scale**

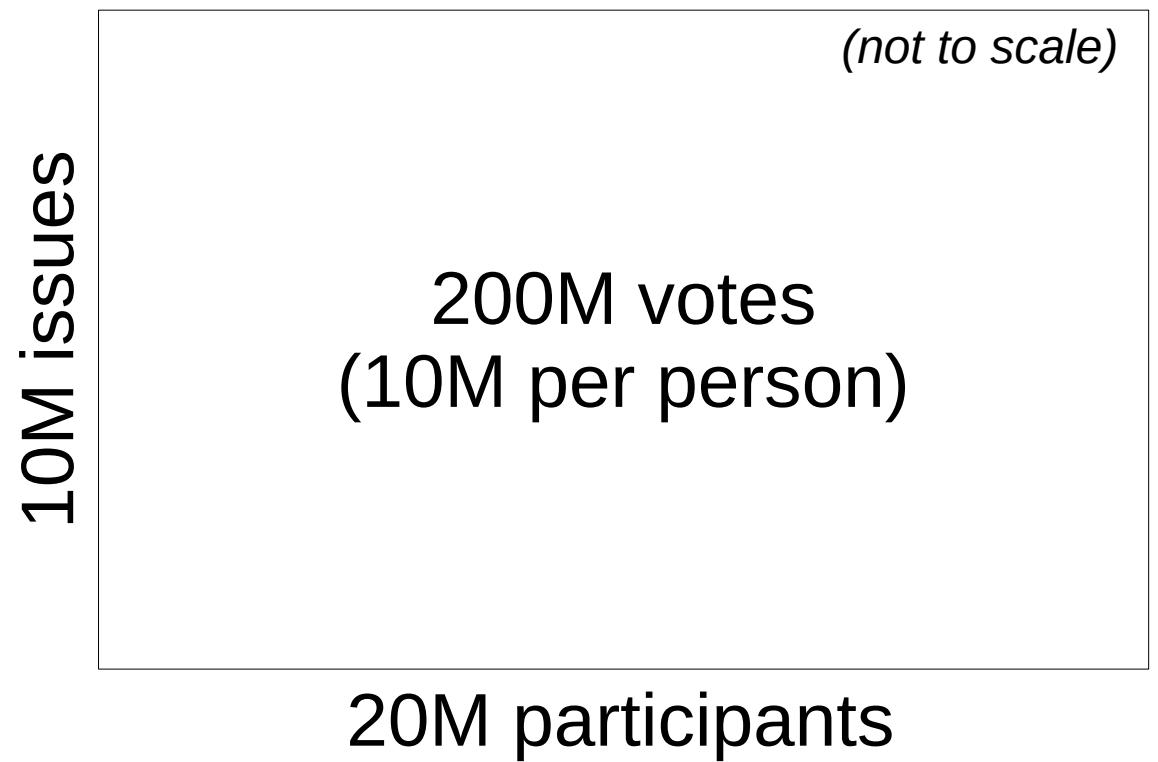

# More people means more governance work

# The scalability challenge

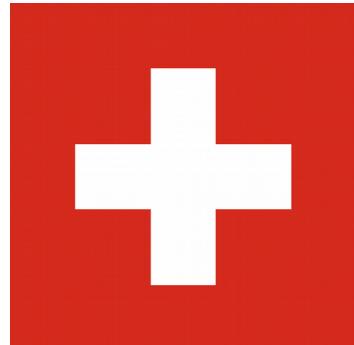

Pure direct democracy may work for a small group...

...but will never work  
for a large country

# Direct democracy can work...

In Switzerland  
for example...

But:

- Switzerland is a small country (~8.5M)
- Most voting done in smaller cantons, towns
- Most governance still handled by representatives; use initiatives & referenda only on select issues

# Saving Time in Direct Democracy

In any direct democracy (even a small one), you probably can't become expert on *every* issue.

Instead, we must take shortcuts.

- Ask a friend who knows more.
- Get opinion of a trusted expert.

If friend's or expert's opinion makes sense to us, we may decide to vote according to their advice.

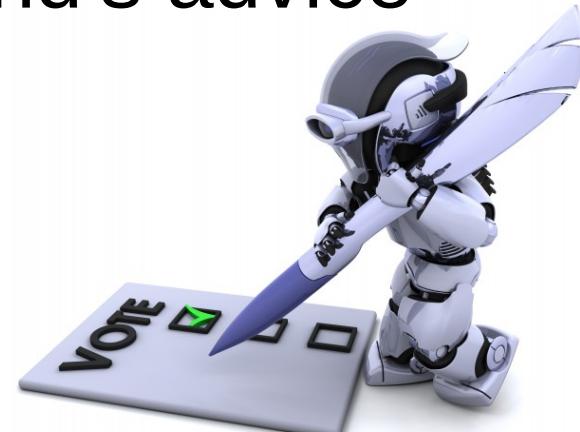

# What is Liquid Democracy?

It's just **technology-enabled**  
**following of advice you trust.**

If there are many healthcare issues to vote on, and I'm not an expert but trust a friend who is, I can **delegate** my vote on health issues to her.

- My vote automatically “follows” friend’s advice
- But *only* as long as I want.  
I can cancel anytime and vote for myself again.

# Different Topics, Different Experts

Representative democracy falsely presumes we can find representatives who are **competent in everything**.

- We get representatives specializing *only in politics*, and not in any topics on which they're setting policy.

Liquid democracy allows voters to delegate to *different representatives in different areas*.

- Delegate health issues to my doctor friend
- Delegate technology issues to geek friend

Bring the benefits of **specialization** to democracy

# Freedom of Representative Choice

Representative democracy typically gives voters only a few choices

- Known insiders with party support
- High barriers to official candidacy

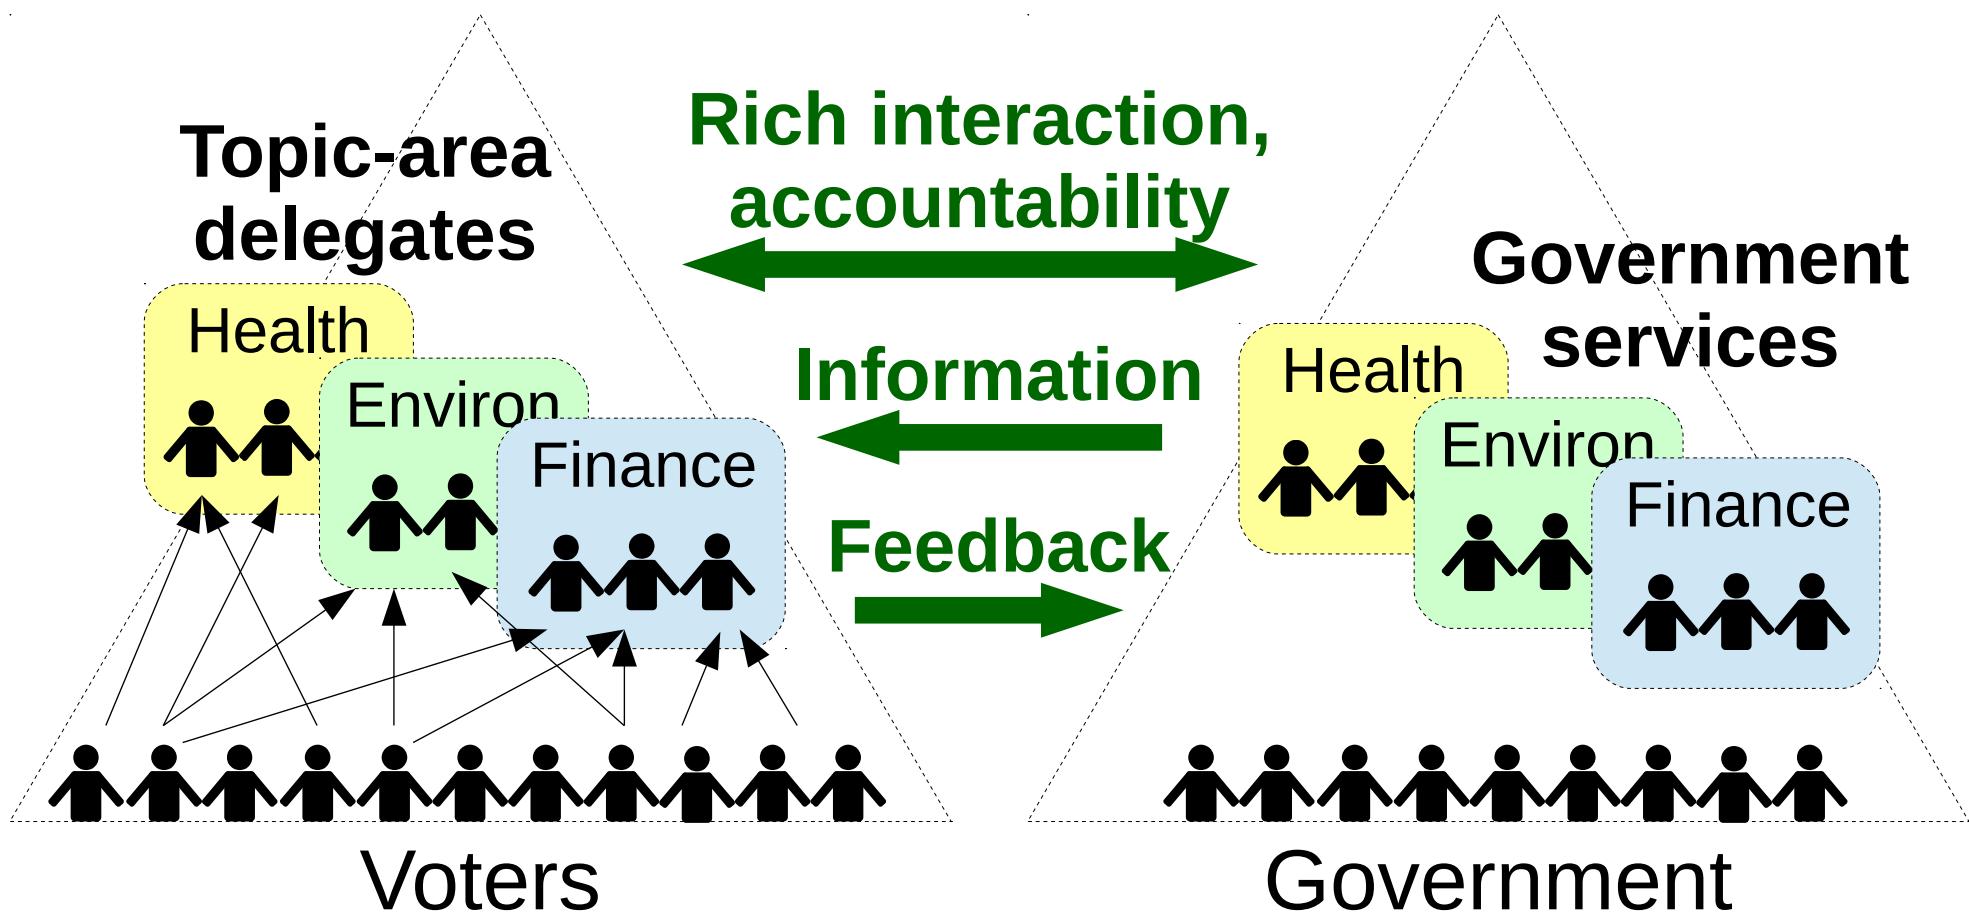

Liquid democracy lets *anyone* be a representative

- If you give good advice & someone wants to take it, why shouldn't they?

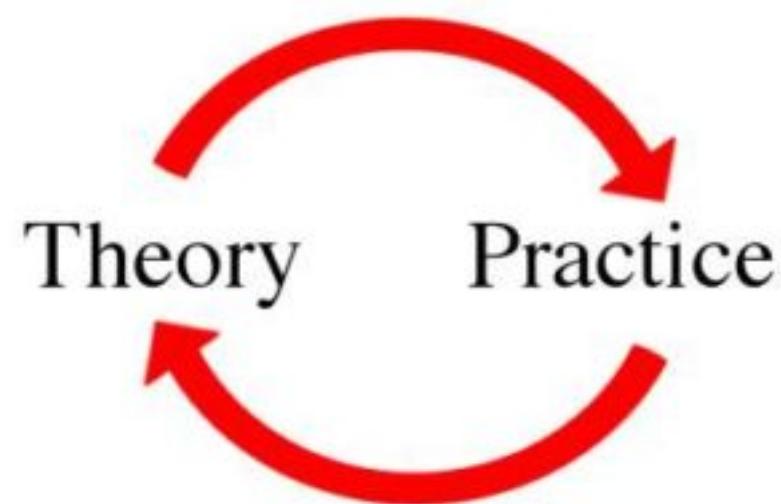

Your choice is limited only by the people you know

# Deep and broad voter participation

Liquid democracy removes the information and accountability bottleneck at the top

# From Theory to Practice

# LiquidFeedback

Platform developed and used by the German Pirate Party for several years starting in 2006

The screenshot shows the LiquidFeedback platform interface. At the top, there is a navigation bar with links: Startseite, Themenbereiche, Mitglieder, Kontakte, About, Bug report, and a gear icon. To the right of the navigation bar is a logo consisting of a green circle with a white plus sign inside, followed by the text "LiquidFeedback" in a large, bold, black font.

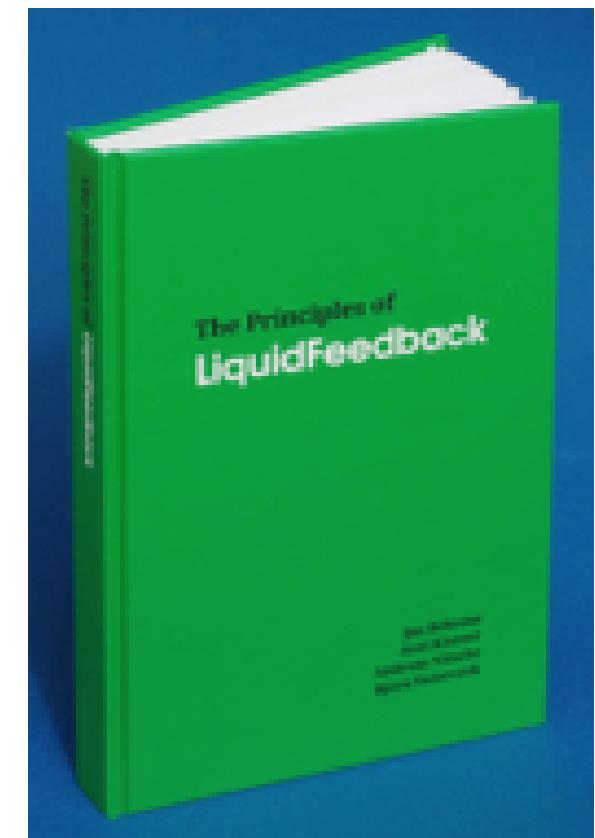

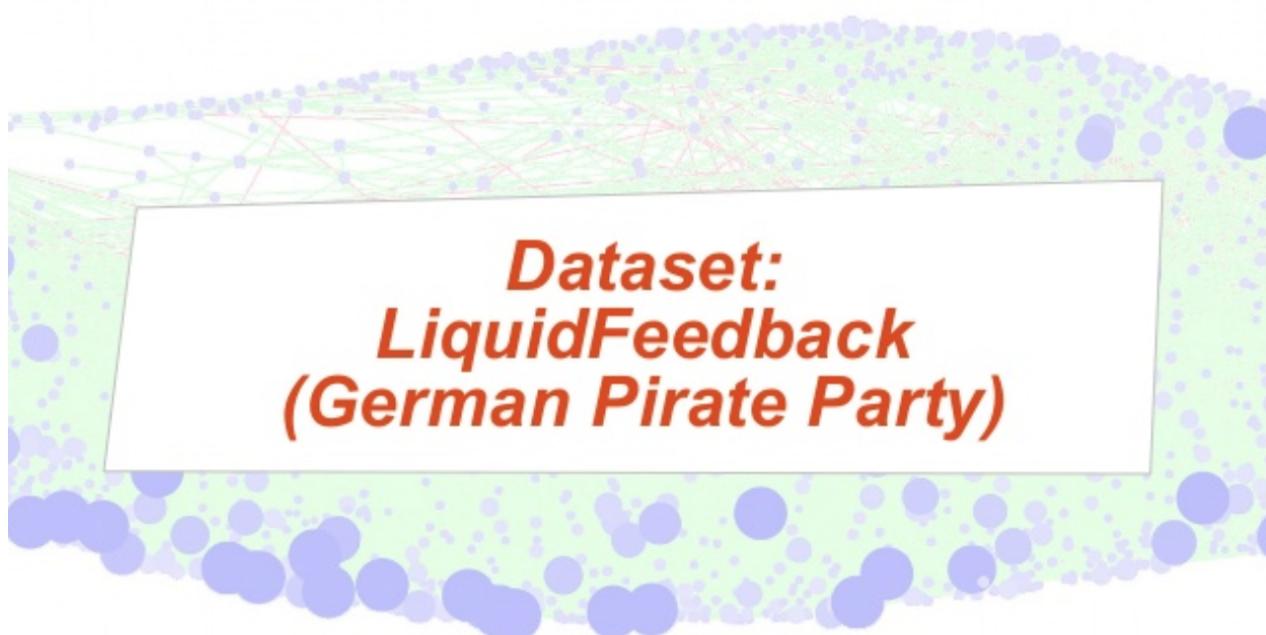

The main content area displays a table of proposals. The table has columns for "Anregung" (Proposal), "Meinungsbild" (Mood/Opinion), "Meine Meinung" (My Opinion), "Anregung zur Zeit nicht umgesetzt" (Proposal not implemented at the time), and "Anregung zur Zeit umgesetzt" (Proposal implemented at the time).

Anregung	Meinungsbild	Meine Meinung	Anregung zur Zeit nicht umgesetzt	Anregung zur Zeit umgesetzt
<a href="#">Kinder berücksichtigen</a>		darf nicht soll nicht neutral soll <b>muss</b>		
<a href="#">Zollgrenze</a>		darf nicht soll nicht <b>neutral</b> soll muss		
<a href="#">Grenzen schließen</a>		<b>darf nicht</b> soll nicht neutral soll muss		
<a href="#">Vermögenssteuer</a>		darf nicht soll nicht neutral <b>soll</b> muss		
<a href="#">100% für Kinder</a>		darf nicht soll nicht <b>neutral</b> <b>soll</b> muss		
<a href="#">Kinder nur vom Staat</a>		darf nicht soll nicht <b>neutral</b> soll muss		
<a href="#">Robotersklaven vom Orion</a>		darf nicht soll nicht <b>neutral</b> soll muss		

Below the table, there is a link to "Neue Anregung hinzufügen" (Add new proposal). The interface is in German.

# LiquidFeedback

German Pirate Party experiment produced important lessons and voter-behavior datasets

# DemocracyOS

Developed [Democracia en Red](#) in Buenos Aires,  
subject of [TED talk](#) by Pia Mancini

# Great, so what could go wrong?

A lot, unfortunately – if we're not careful.

# Great, so what could go wrong?

A few (of the many) challenges to address:

- Unintended concentration of delegated votes
- Voter privacy versus delegate accountability
- Building secure decentralized implementations

# Concentration of delegated votes

If many see one person as the top expert on topic, and all delegate their votes to same person

- Winner-take-all effect → accidental dictators
- Example: “superdelegates” in LiquidFeedback

Mitigation: enable and encourage voters to **split** their voting power among multiple delegates

- Avoid winner-take-all, give not-quite-top experts their fair share of delegated voting power too

# Voting privacy versus accountability

We usually want to enforce  
**voting privacy**

- So voters can express preferences freely
- So voters can't prove how they voted to anyone trying to coerce them

But if you delegate your vote to a friend or expert, don't you *need to know* how they cast your vote to keep them accountable?

# Voting privacy versus accountability

Mitigation: keep delegated votes private, but enable private *comparison of voting record*.

- I can see that my [potential] delegate has agreed with me about 75% of the time
- I can't see how they cast any particular vote

Current liquid democracy systems don't do this, but the needed underlying technologies exist.

# Implementation security challenges

Current Liquid Democracy prototypes have  
**single points of failure or compromise.**

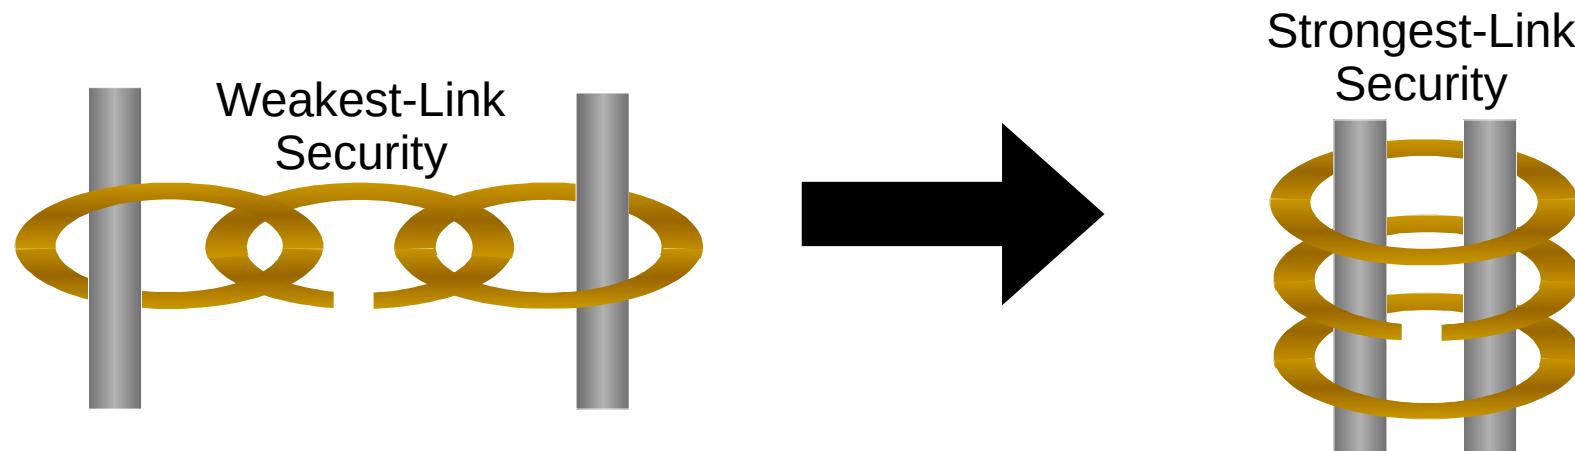

- You completely trust whoever runs the server
- Unscrupulous admin or hacker can do anything

Should currently be used **only** for small-scale experiments in “friendly” security environments!

# We need secure decentralized tools

From “weakest-link” to “strongest-link” security

Mission of my lab at EPFL (w/ many collaborators):  
Create **open-source decentralized platform** with  
the scalability, security, and privacy needed for  
trust-critical uses such as Liquid Democracy

# Conclusion

Liquid Democracy gives voters *individual choice*

- of whether to participate a lot or just a little
- of which topics to follow and vote on directly
- of whose voting advice to trust

**We *can* make direct democracy scale!**

- But many challenges to solve.

# How we can make it happen

Safely deploying liquid democracy will require:

- **Communities** to organize and participate in *small-scale, non-critical experiments* first
- **Researchers** to develop the theory, and to study and learn from experiments
- **Technologists** to build secure decentralized platforms for liquid democracy
- **Governments** to provide deployment support and set standards for security, privacy

# Thank you!
